# Full Digital Conference System Android client software

TS-0300MAR software V3.132

Description

The software runs on the Android operating system and can be installed on Android phones or Android tablets; the software supports meeting creation, starting sign-ins during meetings, voting, switching microphones on and off, audio adjustment, microphone lifting, and turning off wireless units, etc.; suitable for various conference venues .

Description

* The software runs on the Android operating system and can be installed on Android phones or Android tablets.
* Support Chinese or English version, and can choose Chinese or English version according to user needs.
* Support users to initiate meeting check-in through Android phones or Android tablets during the meeting, without being restricted by scene or location, making it flexible and convenient.
* Support users to initiate meeting voting through Android phones or Android tablets during the meeting, save voting records, and create different votes, such as satisfaction, election, rating, custom voting, etc.
* Support check-in and voting record export document functions, and support common document formats (doc/docx/xls/xlsx/ppt/pptx).
* With the microphone list module, support adjusting microphone sensitivity, adjusting microphone EQ, adjusting microphone switch, switching microphone speech mode, etc. by searching or filtering microphone information (microphone type, microphone identity).
* Support controlling the wireless microphone unit to control one-key shutdown and the microphone unit lifting function.
* Support receiving conference microphone calls for tea, paper, pens and other service requirements. The mobile APP or tablet has a pop-up window display; after calling the service, the waiting status is displayed, and the status is completed when the logistics service personnel complete the processing.
* Support receiving conference microphone speaking applications, and can agree or reject participants' speaking applications through the software.
* The APP supports changing the background and startup page, and the built-in red and blue themes can be switched freely.
* Support setting APP account permissions, and open corresponding functional modules according to actual needs (including microphone switch, EQ adjustment, meeting sign-in and voting, speech mode switching, etc.)
