Information signage box TH-31KBHA

Embedded software: Content management, acquisition and editing management service software V1.6

Description

The information signage release terminal supports content release with a display by connecting to the medical intercom system. It can be applied to the lobby of various medical places, mainly to use the introduction of the ward, the style of the medical staff, duty information, contact information of each department, notification prompts, and emergency notices for publicity and important information announcement.

Description

* Support multi-region data to be played in different scrolling forms.
* Support real-time synchronization of medical and nursing schedules, department contacts, nursing labels, ward slogans, emergency notifications and other information pushed by the background management system.
* Real-time synchronization of server time, which can display time, notifications, related prompt information, etc.
* Support display of ward announcement information, information about nurses or doctors on duty, hospital education information, etc.
* Support temporary emergency notification function.
* Support infrared remote control for long-distance configuration.

Embedded software: Content management, acquisition and editing management service software V1.6

Specification

Operating system	Android 7.1
CPU	Dual-core Cortex-A72 + quad-core Cortex-A53 processor, up to 1.8GHz
Memory	4G
Storage	eMMC 32G
WiFi/Bluetooth	AP6356S 2×2 MIMO 802.11 ac/b/g/n WIFI+BT4.1
Device interface	1×DC power input interface; 1×RJ45 Gigabit Ethernet port; 1×HDMI2.0 interface; 1×TYPE-C interface; 2×antennas; 1×3.5mm headphone jack; 1×USB3.0 interface, 3×USB2.0 interfaces, 1×TF card slot
Power supply	12V DC
Watchdog	Support
Operating temperature	0℃~45℃
Storage temperature	-20℃~70℃
Humidity	10%~95% (no condensation)
Weight	0.53kg
Dimensions (W×D×H)	125×126×31mm
