

Emergency button

TH-31AN

Description

The emergency button is suitable for public toilets and independent toilets in hospitals .

Feature

1. Portable and easy to meet the needs of most installation scenarios.
2. High sensitivity, can provide security.
3. The equipment is installed in the bathroom of the ward and has waterproof function
4. When the button is pressed, the medical host at the nurse station will receive an emergency alarm.
5. Lightly pull the rope or touch the button to send an alarm message. It does not support remote cancellation of the alarm. If you want to cancel the alarm, you must go to the scene to reset.
