# Conference System Access Control Software V6.86

TR-HACI

Description:

When the conference room reservation is successful, the conference system will link the access control system to grant the participants access rights in the designated conference room and meeting time.

Feature:

* It has the function of docking with door opening commands. After the conference system verifies the identity, it calls the door opening command through the interface to open the conference room door lock.
* It has the function of personnel docking. The conference system synchronizes the personnel information of the access control system. The personnel information of the conference system can be synchronized to the access control system to realize the function of personnel docking.
* It has the function of docking with access control points. The access control points of the access control system are bound to the conference room of the conference system to confirm the location information of the conference room.
* It has the function of docking with access control access. The conference system can synchronize personnel/access time/access control points to the access control system to realize the function of docking with access control access.
* It has the function of customizing the door opening method. The access control system can set the access control access method of the conference room, which can be set to password unlocking/swipe card unlocking to realize the function of customizing the door opening method.
