Product introduction
The wireless conference system is composed of a wireless controller host, desktop wireless conference unit, an embedded conference unit and a conference unit with desktop card. It adopts WIFI/GSM frequency range to transmit and control. The system has these functions including conference speech, meeting attendance, voting, simultaneous interpretation, electronic table card, camera tracking, fire linkage and other conference functions. And it also has optical fiber transmission, double backup, network management and other functions. It is widely applied to round table meeting room, square desk conference room, multi-function hall, banquet hall, lecture hall and other places.

Product Features
* **Wireless Transmission**
  It uses 802.11g communication band. The product has a stronger anti-interference ability. And it can provide greater bandwidth and transmission speed. It is not affected by mobile phones and other Bluetooth devices to ensure the best signal reception.

* **Secure Encryption System**
The product uses 128 bit AES encryption technology. It supports WPA/WPA2 wireless security technology, which prevents eavesdropping and unauthorized access. And it provides a higher level of confidentiality of the conference system.

* **Powerful applications**
  It supports wireless and wired conference speech, meeting attendance, voting, custom voting, simultaneous interpretation, video tracking, fire linkage and other meeting functions. And it also has the double backup, network control and other functions. The function is highly centralized, and the system configuration is simple.

* **Remote Control**
  Conference control controller and computer use TCP/IP protocol, connecting internet through the Ethernet interface, which can be remotely controlled.

* **Simultaneous Interpretation Function**
  With digital audio transmission technology, simultaneous interpretation channel number 63+1, speech separation technology.

* **Many Types of Units**
  There are many units to choose, including desktop, embedded, with a vote, with IC sign in and with electronic.

* **More Than Two Meeting Modes**
  It supports four modes including FIFO mode, normal mode, voice control mode, the application of speech.

* **Extensions**
  Single machine supports 128 conference units. It can increase 4996 units by increasing the expansion of controller, five support ‘hot plug’.

* **Fire Alarm**
  Controller with fire linkage interface can be linked with the fire, prompting fire information.

* **Intelligent Management**
  In case of system abnormality, the system can be automatically reset and start up. It can view the status of all wireless devices and keep the system running smoothly.

* **Recording Function**
  With USB interface recording function.

* **Voice Function**
  The chairman unit has the function of voice control. The microphone can be smart open.

* **Electronic Table Display**
  The name of participants can be displayed by large LCD screen with full view, the information can be quickly update by PC.

* **Two Application Function**
  There are two application function. The tea can be applied through the application key.

* **Basics Functions**
  Wireless microphone has the maximum support of 6 microphones at the same time. It has large battery capacity with super long working hours.
